

# Accessories

## ProFlex Shaft

Ideal for drilling, milling, grinding, sanding, polishing, and buffing. Available in 40" and 52" inch lengths, 3/8-24 threaded spindle with keyless chuck, 1/4" capacity with a 1/4" drive post. Use with the Switch-n-Lock Drill Mount for complete power tool extension.

## Switch-n-Lock Drill Mount

Compact, light and economical. It can be attached to a table, workbench, counter top or sawhorse - practically anywhere there is a flat surface. It transforms any electric drill into a stationary grinder, sander, buffer, polisher or flex shaft power source. Can be mounted vertically or horizontally and has a 360 degree rotational capability for optimum positioning.

## Tapered Spindle

Spindle has a 1/2" arbor and is generally used with bench grinders. Spindles are used with lead, shellaced and leather centerd buffs.

## 1/2" Arbor Adaptor

1/2" Arbor Adaptor has a 1/4" shank that fits all electric drills and include side plates which hold accessories securely. Arbor allows for use with a maximum 1" buff face width.

## Metal Flanges

Flanges are used to reduce the arbor hole on all styles of cotton and felt buffing wheels.

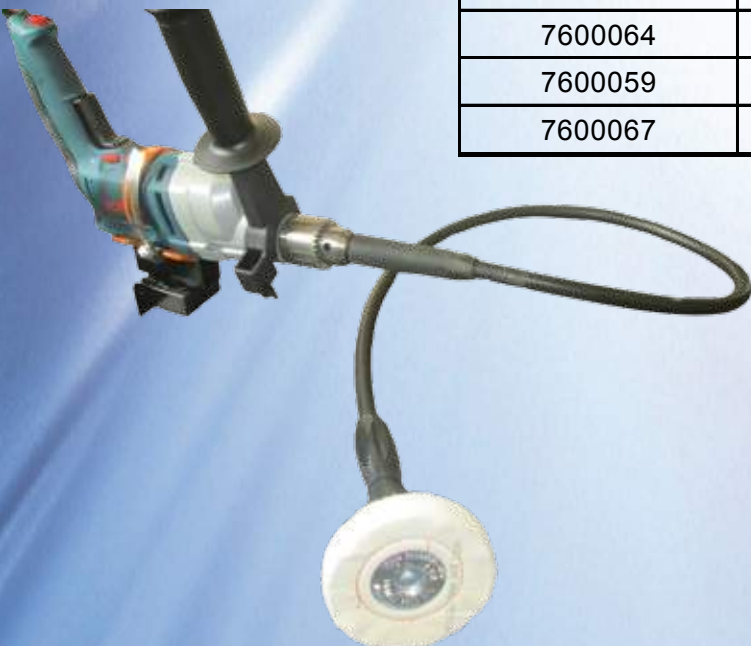

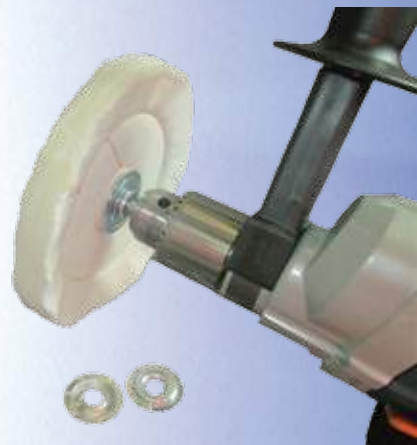

## Rake and Handle

Used for cleaning the working surfaces of all Dico buffs. Hardwood handle and heavy steel rake make this a must-have tool for the avid buff user.

## 1/8" Mandrel

Mandrel is used in conjunction with our midjet buffs making them compatible with any standard rotary tool.
